of Volume Transfer**

Certificate Number: 2017-020-2

Items Submitted:

| Quantity | Nominal Volume | Manufacturer | Type |
|----------|----------------|----------------------|----------------|
| 2 | 100 gal | Seraphin / Detterman | 100 gal prover |

Submitted By: FSCP Area 7017360 SW 14 th st.
Martell, NE 68404**POC:** Scott Arner
402-450-1106**Test Results**

| Nominal Volume | Serial Number | Material | Cubical Coefficient of Expansion (°F) | As Found Volume Delivered @ 60 °F | As left Volume Delivered @ 60 °F | Uncertainty (U) | (k) |
|----------------|---------------|----------|---------------------------------------|-----------------------------------|----------------------------------|-----------------|------|
| 100 gal | 18969 | SS | 0.0000265 | 99.9849 gal | 99.9849 gal | 0.0091 gal | 2.01 |
| 100 gal | 8851397 | SS | 0.0000265 | 99.995 gal | 99.995 gal | 0.0091 gal | 2.01 |

The data in this report only applies to those items specifically listed on this report.

Volume delivered at 60°F after a 30 second pour and 10 second drain for test measures. For provers and a 30 second drain time would apply.

Conversion Factors:1 gal = 231 in³1 gal = 3.785 412 E-03 m³**Traceability Statement:**

The artifact(s) described in this report have been compared to the Standards of the State of Nebraska. The Standards of the State of Nebraska are traceable to the International System of Units (SI) through the National Institute of Standards and Technology (NIST) and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory. The calibration number for this report is the only unique calibration number to be used in referencing measurement traceability for the artifact(s) described in this report.

Uncertainty Statement:

The combined standard uncertainty includes uncertainties reported for the standard, uncertainties associated with the measurement process, uncertainties for any observed deviations from reference values which are less than surveillance limits and the standard uncertainty for any uncorrected errors. The combined standard uncertainty is multiplied by a coverage factor (*k*), to give the expanded uncertainty, which defines an interval with a 95.45 percent level of confidence. The expanded uncertainty presented in this report is consistent with the Guide to the Expression of Uncertainty in Measurement (2008, revised 2012). Some components of the calibration can be evaluated through a Type A evaluation, or the method of evaluation of uncertainty by the statistical analysis (standard deviation) from the observations taken.

Pertinent Information:

The artifact(s) listed above have been found and/or left within the maximum permissible error for the specification stated above, except as noted. An artifact is considered in-compliance when the correction plus the measurement uncertainty is equal to or less than the maximum permissible error.

Condition of Item(s) Submitted for Calibration:

Minor wear

Laboratory Reference Standard Used:

100 gal NE 44158

Treatment of Item(s) before Calibration:

Item(s) were tested as found

Procedure Used:

NISTIR 7383 (2017), SOP 19

Environmental conditions at time of calibration:

| | | | |
|---------------|--------|------------|------|
| Temp °C | 23.0 | Humidity % | 55.8 |
| Pressure mmHg | 766.31 | | |

Water temperature at time of calibration:

69.00 °F

Calibration Certificate for Volume Transfer of LPG

Calibration Date: August 30, 2017

Certificate Number: 2017-020-1

Submitted by: FSCP Area 70
17360 SW 14 th st
Martell, NE 68404

POC: Scott Arner
Phone: 402-450-1106

Date Received: 08/30/2017

PO Number: N/A
Job Order #: N/A

Test Item(s): 103 gal LPG Prover

Material: Steel, Pressure Vessel, Low Carbon
Specification: NIST HB 150-4

Serial No: A-4-L6998

Cubical Coefficient of Expansion: 0.000016 / °F

Manufacture: Unknown

Condition: good

Artifact(s) Description

Calibration Information

Reference Standards Used:

NE-44158-100gal
NE-514-1gal

Procedure: NIST SOP 21

Metrologist: JPL

Temperature: 24.3 °C

Humidity: 57.6 % RH

Water Temperature: 21.0 °C

Calibration Results

| Nominal Volume (at zero mark on gauge) | Prover Volume As Found @ 60 °F and 100 psig (gal) | Prover Volume As Left @ 60 °F and 100 psig (gal) | Spec. Tol. ± (gal) | Uncertainty ± (gal) | k factor | Degrees of Freedom |
|---|--|---|--------------------------|------------------------|----------|-----------------------|
| 103 gal | 102.916 | 102.916 | 0.206 | 0.021 | 2.001 | 4282 |

Conversion Factors

1 gallon (U.S.) (gal) = 231 in³

1 gallon (U.S.) (gal) = 3.785 412 E-03 m³

Pertinent Information

- The artifact is considered in-tolerance when the error is equal to or less than the specified tolerance minus the measurement uncertainty. **RED** print indicates an out-of-tolerance reading.
- Enter the Pressure Correction from Table 1 that corresponds with the pressure being tested on your LPG Meter Test form.
- The calibration item was calibrated in a 'wet down' condition using water. The calibration data above applies when the prover bottom zero is obtained during a 30 (± 5) second period after cessation of the main flow.
- The drain time (using the on board pump) to the bottom zero was approximately 5 minute(s) 0 seconds.
- The Top Security Seal Number is Ne lab and the Bottom Security Seal Number is Ne Lab.

Traceability Statement

The artifact(s) described in this report have been compared to the Standards of the State of Nebraska. The Standards of the State of Nebraska are traceable to the National Institute of Standards and Technology (NIST) and are part of a comprehensive measurement assurance program for ensuring continued accuracy and measurement traceability within the level of uncertainty reported by this laboratory. The International System of Units (SI) for volume is the cubic meter (m³) (see Conversion Factors below). The report number for this report is the only unique report number to be used in referencing measurement traceability for the artifact(s) described in this report.

Uncertainty Statement

The combined standard uncertainty includes uncertainties for the standard(s), for the measurement process, for the material cubical coefficient of expansion, for reading meniscus, for the pressure gauge, for graduated neck errors and for the thermometer(s) used for measuring the water temperature. The combined standard uncertainty is multiplied by a coverage factor, *k*, to give the expanded uncertainty, which defines an interval with a 95.45 % level of confidence. The expanded uncertainty presented in this report is consistent with JCGM 100:2008, *Evaluation of measurement data — Guide to the expression of uncertainty in measurement (GUM 1995 with minor corrections)*. A component for the effects of viscosity was not included in the uncertainty budget.
